

Swedish Utility Giant chooses Speed-tec

Skelleftea Kraft have commissioned integrated Systems to manage their Emergency Preparedness at both Headquarters buildings and outlying Hydro Electric Power Plants.

“This is a pivotal project, combining UK and Swedish technical disciplines to deliver excellence”, commented Global Head of Emergency Planning; Nigel Urquhart. “In northern Sweden, Emergency Plans have to cope with the additional considerations of sub zero temperatures for almost half the year and potentially dreadful weather conditions for a quarter of the year. This requires geo-peculiar risk preparedness. Add to that the possibility of terrorist attack to infrastructure supplies and one has a heady mix of risk threats to counter.”
